Data notes — `seller_funnel_weekly.csv`

Everything here is invented for this exercise: the numbers, the cities, the data issues, the people.

What the business does

Spinny buys used cars from people who want to sell, refurbishes them, and sells them to buyers. This file covers the **seller side** only. Buyer-side activity (test drives, bookings, deliveries) is a different funnel and is not in this data.

The seller funnel

A **seller lead** comes in → an inspector **inspects** the car → Spinny **makes an offer** → if the seller accepts, the car is **stocked in**. A stockin is the main supply number each city is measured on.

What moves stockins, and who owns each lever:

Lever	Metric	Owner
Lead volume, by channel	`leads`	Marketing (also owns spend, which is **not in this file**)
Inspection rate	`inspections_done ÷ leads`	City ops
Offer rate	`offers_made ÷ inspections_done`	Inspection quality / policy
Stockin rate	`stockins ÷ offers_made`	Mostly the gap between Spinny's offer and the seller's expected price → Pricing team

The file

One row per **week × city × channel × car age band**. Weeks start Monday. **Data as of Thu 8 Oct 2026** (last complete day): the week of 5 Oct has **4 of 7 days**.

Column	Meaning
`week_start`	Monday of the week the lead was **created**
`city`	Pune · Hyderabad · Bengaluru · Delhi NCR
`channel`	paid_digital · organic · referral · partner (· unknown, see notes)
`car_age_band`	0-3y · 4-6y · 7y+
`leads`	seller leads created that week
`inspections_done`	of those leads, how many were inspected (so far)
`offers_made`	of those, how many received an offer (so far)
`stockins`	of those, how many Spinny has bought (so far)
`avg_offer_price`	average offer Spinny made, ₹
`avg_expected_price`	average price the seller said they expected, ₹

Everything is attributed to the lead's creation week. A lead can be inspected, offered and stocked in up to **14 days** after it is created; about 70% of eventual stockins happen within the first 7 days. So the most recent weeks have not finished converting.

Known data issues

- **Pune, 7–13 Sep:** an app release stopped inspection completions being logged for most of the week. Inspections happened as normal; offers and stockins were recorded correctly. Fixed 14 Sep. Not backfilled.
- **Bengaluru, before 3 Aug:** a tracking change means ~15% of leads carry `channel = unknown`. Volume is correct; channel split is not.
- **Marketing spend, campaign dates, pricing-policy changes, inspector headcount:** not in this file. The teams that own them have them.
